

Target Audience	Value Proposition(s)	North Star Metric
Our target audience will be Gen Z and Millennials. Globally, they account for 24.6% and 22.9% of the population respectively (47.5% total), and 17.1% and 22.5% respectively of the global spending (39.6% total). According to NielsenIQ and World Data Lab reports, Gen Z will see the fastest growth in spending power in the next 10 years. Since our proposition is tech-focused, this demographic will be more tech-savvy and comfortable with using the product.	Experience shopping all outfits that matter· All Brands who care. An omni-channel sensory-rich experience that goes beyond just purchasing products, utilizing AI and VR/AR to personalize the shopping experience. Make it personal, revolutionizing a new standard for contemporary luxury retail shopping.	CLTV:CAC ratio- CLTV (customer lifetime value (what a customer is spending in his whole lifetime on our products, calculated by 1/churn rate (customer satisfaction) * average product order) divided by CAC (customer acquisition cost) (Amount of new € generated / marketing cost) Describes how efficient capital is allocated along marketing expenses compared to the capital efficiency of the product as well the customer satisfaction and pricing

WOW Moment <i>How we will initially ‘WOW’ our customers and make them interested in buying</i>			Product DNA <i>How we will keep customers hooked and returning to us with our product DNA</i>		
Awareness We want to maximize the word of mouth of our new customer experience attracting new potential clients We want to use social media and influencers to achieve more engagement and awareness- they will be used to make customers aware of our app and downloading it, bringing them to the next stage (acquisition) The intuitive app provides immediate value to users, facilitating new user recruitment and supporting the omnichannel aspect by linking the app to activities in the store. Metrics: Engagement, reach, number of unique visits	Acquisition Convert interest in downloading apps and visiting the store by forcing users to engage with one or both channels. Store QR code placement: Placing QR codes at key points in the store that encourage customers to download the app for exclusive benefits, such as additional discounts or early access to new collections- this will acquire more app users Offer a discount or welcome voucher for people that sign up via QR or through our influencer marketing and prioritize booking their first appointment for their VR fitting in store Metrics: number of new customer data, Unique visits	Activation Activation is a core aspect for ensuring that our customers understand the real value of our new experience- it is crucial to encourage them to use the app for exclusive contents in order to get data of our customer base. Furthermore, we want them to engage with our demonstration store. Push notification for events and promotions: send notification informing our customers about incoming exclusive influencers or brands events. Metrics: CAC, time spent on app and in-store.	Retention Foster ongoing engagement, making customers continue interacting with both the in-store experience and the app-maximize returning customers ‘cortEXTRA’ - omni-channel loyalty program where customers gain points or ‘currency’ for online and offline purchases. These points can be collected and exchanged for discounts and rewards, and/or be used as a currency within the ECL environment. This will keep users engaged over time and builds long term loyalty. Metrics: Number of returning customers, Customer Lifetime Value, Churn	Revenue Maximize revenue by having a streamlined checkout process, making it as easy as possible for customers to spend money. Upselling personalized recommendations to complement products in customers’ baskets. Streamlined checkout process in-app and instore and reducing friction, for example taking inspiration from Amazon Go stores. Metrics: Average spend per customer, basket size, sales, revenue	Referral Encourage satisfied clients to refer the experience that they had with our new omnichannel model. It is crucial that every satisfied customer became an ambassador for our new experience. For each referral you can choose from a selection of rewards to further encourage referrals- these rewards can be calculated using machine learning and psychology to be as personalized as possible, to make them as enticing for customers in order to maximise referrals. Social sharing and user-generated content add authenticity and broaden the reach of the brand’s omnichannel message. This will attract more users while rewarding current customers, creating a positive feedback loop. Metrics: Referral rate

Prioritization:

High urgency --> high effort to user value ratio

Low urgency --> low effort to user value ratio
