

1. Background and Context

The group provides a clear overview of InnoWave Global and effectively identifies knowledge fragmentation and coordination breakdowns as key organisational challenges. The Innovation Strategist persona is well developed and helps humanise the problem, illustrating how duplicated work, limited visibility across regions, and administrative overload affect day-to-day practice. However, the background analysis could be strengthened by deeper engagement with organisational and industry context, particularly in explaining why these challenges are especially acute for InnoWave rather than common to all large consultancies.

2. Problem Statement

The problem is framed coherently around inefficiency, fragmentation, and lost innovation capacity, and the narrative around “administrative nightmares” makes the issues accessible. That said, the problem definition remains quite broad and occasionally blends into solution language, which weakens analytical sharpness. More explicit prioritisation of which pain points matter most—and how they manifest at specific moments in the workflow—would help clarify the core problem the solution is designed to address.

3. Solution and Features

WaveAssist and InnoBot are presented as an integrated, enterprise-wide augmentation solution with a strong emphasis on collaboration and knowledge access. The report makes a clear effort to differentiate the system from rule-based tools through semantic search and group-based AI interaction. However, despite this clarification, the explanation of how the AI actually reasons, learns, or adapts remains limited. Several features are described in conceptual or aspirational terms, making it difficult to fully assess what is technically novel versus what relies on improved interface and integration. Greater clarity on AI mechanisms and boundaries would strengthen the solution’s credibility.

4. Project Management, Presentation, and Report

The report is clearly organised and transparently structured around the presentation slides, demonstrating good effort to respond to feedback by adding explanation where requested. The overall proposal would benefit from tighter synthesis and a clearer end-to-end storyline. Presentation issues noted earlier, including clarity and coherence, will be considered during moderation.
