

MSCI203 Digital Business and Organisational Transformation

Group assignment

Michaelmas Term 2025/2026

Module leads:

João Baptista (j.baptista@lancaster.ac.uk) / Shiyang Zhang (shiyang.zhang@lancaster.ac.uk)

Group Presentation / Report – worth 40% of overall module mark

The final submitted document should include a page signed by all members of the team confirming that each member contributed equally to the work, and that no parts of the text were AI generated – the use of AI is permitted for research and image generation only.

Group assignment briefing:

You are a consulting team advising **InnoWave Global** on its digital transformation strategy. The company's Board has made it clear that the goal is to **augment employees with AI rather than automate and replace them**. Your task is to design an AI-enabled solution that demonstrates how *augmentation* can strengthen the company's ability to innovate, compete and create value for the business.

Each group will select **one role** within InnoWave Global as the focus of their project:

- **Business Analyst**
- **Innovation Strategist**
- **Marketing Lead**

Your team is expected to:

1. **Analyse strategic drivers** – Review the market environment and explain how AI adoption is aligned and important for InnoWave strategy at this point.
2. **Investigate the chosen role** – Research the workflows, responsibilities and skill sets associated with the role that the AI will augment. Develop personas and empathy maps to capture the human experience of this work.
3. **Identify opportunities for augmentation** – Show how AI will enhance aspects of the role's work, while retaining human-in-the-loop or the employee central to the role.
4. **Design the AI-enabled solution** – Present a prototype or mock-up that demonstrates how the AI solution would function in practice and how it integrates into InnoWave's broader digital workplace.
5. **Articulate the value** – Explain how the solution supports both the individual role and InnoWave's broader digital transformation and competitive positioning.

Your team is expected to present slides with notes that should function as a report to the management of the client organisation covering all these aspects of the project.

Company Background: InnoWave Global

InnoWave Global is a multinational professional services and technology company with approximately 25,000 employees spread across Europe, Asia and North America. Headquartered in London, the company provides a mix of consulting, digital transformation services and technology-enabled solutions for clients in industries ranging from healthcare and finance to retail and consumer goods.

The company grew rapidly over the last decade through acquisitions of boutique consultancies and technology providers. While this expansion has allowed InnoWave to diversify its expertise and client base, it has also created challenges: regional offices often operate with their own processes and digital tools, making it difficult to share knowledge and collaborate across the global network. Employees have voiced frustration about duplicated work, inconsistent systems and limited opportunities to experiment with new ways of working.

The competitive environment has also intensified. On one side, **agile start-ups** are introducing AI-driven platforms and services at a much faster pace, threatening to disrupt traditional consulting offerings. On the other, **large global firms** with deeper resources are building innovation ecosystems and heavily investing in AI-powered employee augmentation. InnoWave is therefore squeezed between nimble disruptors and powerful incumbents.

Despite these pressures, InnoWave has maintained strong client relationships, thanks to its reputation for **blending analytical expertise with creative problem-solving**. Many of its flagship projects involve working closely with clients to design new digital services, improve customer experiences or create innovative strategies for entering new markets. Success depends on the ability of employees to bring both technical knowledge and creativity to how they work and develop solutions for their clients.

Recognising the urgency of change, the Board of Directors has announced a new **Digital Innovation and Transformation Programme**. The vision is *not to automate* work or reduce headcount but to **augment employees with AI** — empowering them to work more creatively, make faster and better-informed decisions and collaborate seamlessly across regions. The ambition is to create a more connected, knowledge-driven organisation that attracts top talent, inspires innovation and gains a sustainable competitive edge in a rapidly evolving marketplace.

Roles to choose from. Your consulting team must select **one role** of the following three roles within InnoWave Global as the focus of your project:

1. Business Analyst

Business Analysts support client projects by gathering data from multiple sources, synthesising trends, and producing reports, models and visualisations that inform decision-making. They work closely with consultants and client teams to ensure findings are aligned with business objectives. The role demands strong quantitative reasoning, attention to detail and the ability to communicate complex results in accessible ways.

2. Innovation Strategist

Innovation Strategists explore new growth opportunities for InnoWave and its clients. They monitor market signals, research emerging technologies and facilitate workshops to generate novel service concepts and business models. Their work combines structured analysis with open-ended creativity, requiring both critical thinking and imaginative problem-solving.

3. Marketing Lead

Marketing Leads design campaigns and narratives that communicate InnoWave's services and client successes. Their workflow spans market research, concept development, storytelling and collaboration with design and digital teams. They balance creativity with evidence-based insights, shaping messages that resonate with diverse audiences while strengthening the company's brand.

Your digital solution should reflect the specific business context in the organisation, as well as its culture and internal structure, as well as the needs of the specific role your solution is meant to augment. While the company profiles above are partially fictional, they reflect real organisations, so you are expected to research real organisations that have similar profile. These are starting positions for your consulting team. Your team is supposed to do additional research on real organisations in the same industry to add detail and create a richer and more detailed profile of your client organisation. You have a degree of "creative licence" to fill gaps so you can create additional content that is realistic and "believable", for example in creating credible personas (a technique we will cover in class). However, you should try to find information from real organisations on the web or through interviews with people from that industry, as much as possible. You are also allowed to use AI tools to support you in this research and creative process, by prompting AI on what certain roles entail and how certain roles could be supported by your solution etc. The use of AI in this assignment should only be used to support your research, no large sections of text should be copied directly to the presentation – all text in the presentation **MUST** be original and written by the team, however images can be AI generated.

Final deliverable

The final deliverable is a presentation that functions as a full report of a professional standard to your client that should cover the following sections:

- 1) **Review current situation and focus on problem / opportunity to address.** Review strategic drivers of the business, as well as existing processes using design thinking methods such as empathy maps and personas.
- 2) **Review digital workplace environment and possible use cases** for new AI based solution in the organisation.
- 3) **Propose a new digital strategy and an AI solution** for the organisation
- 4) **Present a design of the frontend of an AI solution within a new digital workplace of the organisation**, and demonstrate how it works from a user perspective
- 5) **Provide an integrated view of the digital transformation required in the organisation** that shows how the AI solution will add strategic value to the organisation

- 6) **Overall reflection on learning:** challenges, how the team worked, what would you do differently?

Organising your team around roles

You will be working in teams of around 6-7 students (team size to be confirmed). We recommend that you start the work all together jointly brainstorming ideas and shaping the strategy and internal structures of the company, while also researching relevant materials from comparable organisations and concepts and ideas from research papers and industry reports. As you progress, the team should split into different sub-teams. One team could focus on strategic drivers for new business models and strategy, while the other focus more on internal capabilities and structures for digital transformation. At a later stage the sub-teams should specialise even more to give each team member a specific responsibility for a section of the final presentation.

Within the team there should also be 2 people that take a broader role: one to act as a project manager to organise meetings, remind the team of timings and deliverables; and a second one responsible for putting together the slides and preparing a professional presentation.

Your team will need to meet frequently, possibly several times a week close to deadlines, sometimes face to face or online. This means that the team needs to agree when to have these regular meetings and use those times to make progress on the project, this requires professional management of the work. Good performance in this assignment depends on how well the TEAM operates to make decisions and progress the project.

We encourage the team to create a **Team Charter** which should be jointly developed and signed – a single page describing the key commitments that each member will follow in contributing to the project: being on time to meetings, preparing in advance, putting best effort etc, and then assign a guardian of these rules, so someone in the team responsible to remind of penalties for any breaches of the jointly agreed guidelines.

The team will be facing significant challenges to coordinate the work on campus and through online tools and platforms. They will need to be very efficient and organised to ensure that progress is made throughout the term. As the team progresses, they should consider **assigning specific roles to individuals** in the team around the following key areas of the project (this is a recommendation, you should follow a structure that is appropriate for you):

- **Review of strategic drivers, opportunities and problems to address**
 - **Organisational strategy:** review market environment and strategic positioning of the organisation. This may involve researching real organisations and build the context of the company from logo and identity to culture, processes and policy. Consider changes in markets and new strategic drivers for the company
 - **AI and Digital Workplace environment:** gather examples of AI and digital workplaces and intranet pages from other real organisations, to link the solution to strategic drivers in the organisation.
- **Internal review**
 - **Design of AI and digital workplace platform:** work with design tools to create a working prototype of the solution which responds to the personas and

organisational context and business strategy. Some of the online methods and tools you are expected to consider using include mural.co, marvelapp, Proto.io, lucidchart.com, balsamiq.com or any other tools you find are useful to develop the materials needed for the project.

- **Coordination roles**

- **Slide structure, layout and storyboarding:** develop a template for the slides and create a structure and logic for the presentation, prepare structure of the report and notes for the final presentation
- **Project management:** manage contributions from all areas and creation of all the required elements, organise meetings, take notes and facilitate collective decision making, and ensure everything is integrated and coherent across sections, ideas and materials covered – including organising and facilitating the online and face to face meetings

Final presentation

You are expected to present your digital transformation project to your client organisation at a simulated meeting with the Board of the company (this is your final presentation which will be marked). You will have a short slot of **10 mins on Thursday, 11th December** to deliver this presentation and convince the client of the value and impact of your proposed solution and project. Your team will have a chance to do a Mock presentation a week before and get feedback on the materials prepared, so all teams should have a full draft of the presentation ready to present in **5 mins on Thursday, 27th November**.

Additional information

We will be releasing some materials in advance of the module and will cover others during the live sessions. All this content is relevant and needed for the assignment. Please review these materials when preparing for your team meetings. You are encouraged to use the methods and tools covered in the course to produce a solution. In your presentation you are expected to use as many of the concepts and readings covered in the lectures as possible and relevant. You are reminded that it is important that you explain how and why you made decisions about the strategy and the design and functionality of your solution. These decisions need to make sense within the context of your organisation and user feedback. You should also be aware that the decisions are made under limited budget and resources, so demanding an unrealistic budget and management structure should be avoided.

Ultimately the presentation should effectively persuade the executive Board of the organisation to invest and provide resources for the project. Marks for the written report and presentation will be awarded for covering the points mentioned above. Innovative approaches to presenting are encouraged.

SUBMISSION DEADLINE: 15:00h (UK time), Thursday 11th December, 2025

IMPORTANT NOTES FOR SUBMITTING:

- Submit a single PDF document with the PPT presentation and the report
 - Make sure you submit on time! Ideally before the deadline to avoid problems
 - Please submit the group project document with statement confirming that the work is original and entirely developed by the team jointly.
 - **Please include a page signed by all members of the team confirming that everyone contributed equally to the work submitted, and that no parts of the text were AI generated – the use of AI is permitted for research and image generation only.**
-
