

News Design. Workshops. Weeks 1 and 2.

Thursday 6 and Thursday 13 March 2025.

Introduction to Adobe InDesign CC.

Lay out the page with these instructions and texts, and the three photographs available from AulaVirtual ADI. The model that you have to imitate is also supplied.

These first two weeks, you are assessed based on your attention, your attendance and the care that you put into completing the task as accurately as possible. In an imitation task, usually the resemblance with the original is assessed. Ideally, you would use the full texts, or at least you would edit them respecting their meaning.

Create the InDesign document with one page (set whether it is an odd or even page number), A3 (297 x 420 mm), 5 columns, 4,233 mm gutter.

Notice that the page is an odd number (15), so it will be a right-hand-side page.

Margins: top, 13 mm; bottom, 19 mm; inside, 10 mm; outside, 16 mm.

Grid leading (*Incremento cada* in Edición > Preferencias > Cuadrículas): 11 pt (start at-*inicio*: 0 mm; from the top margin-*respecto a margen superior*).

Set the language of all text frames to English (UK) – Inglés (Reino Unido), as we are using a British source of content. This enables proper hyphenation at the end of lines in body text (the only text frames that should have hyphenation-*separar* ON; turn it off for other text frames).

The only typefaces throughout the document should be Times New Roman and Arial.

All elements set at 11 pt type size or smaller are set with an 11 pt leading, and they are aligned to the baseline grid ('Alinear con cuadrícula base' command in the Párrafo panel).

For display text elements larger than the leading, use the same type size as the leading size. Alignment to the baseline grid should be turned OFF for them.

All text and image frames start and end in full grid lines and are adjusted to column guides.

The rules below the folio and the byline/dateline are set right in the middle between two grid lines. The rest are placed over grid lines. The thickness (stroke width) of all rules, boxes and borders, including those of photographs, is 0,5 pt.

The picts (square, circle, triangle) are obtained from the Glifos panel on the right side of the Tipografía workspace, selecting Arial or Times New Roman as the typeface.

When you finish, you will usually print out the pages and hand them in (not required on the first week). Remember: A3 size, black and white.

Export the document as a PDF, too, with the name Design25_P1_Thursday_Surname_Name.pdf, and export it again, this time with a visible grid; in the window appearing in Archivo > Exportar (File > Export) after setting the filename (add “_grid” at the end) and where it is saved, export with ☒ Guías visibles y cuadrículas base marked.

Upload all the items in the following list to the activity available in the “AulaVirtual ADI > News Design > Workshops/practice” folder:

- The exported PDF file “Design25_P1_Thursday_Surname_Name.pdf”
- The exported PDF file “Design25_P1_Thursday_Surname_Name_grid.pdf”
- The editable INDD file “Design25_P1_Thursday_Surname_Name.indd”
- The two dependent image files: “athens-eft.jpg” and “dima-lula-reuters.jpg”

Every week, you will have to upload the PDF, INDD and image files, within the deadline (11:30), and print and hand in the paper version, no later than ten minutes after the deadline (11:40).

- Submissions must be completed both via AulaVirtual ADI (internal area > Workshop tasks) and in print, from the 2nd week (hand in to the instructor in class).
- The deadline is 11:30, which is 2 hours and 30 minutes after the start time of the workshop session.
- Upload to AulaVirtual ADI first (PDF, INDD and original files) and print afterwards (A3 or A4 formats, color or black and white, depending on the project and your preferences).
- There is a progressive penalty for delays: one point (over ten) during the first ten minutes and another one for the next ten minutes (or a fraction thereof).
- You will be allowed to hand in the printed version within the first ten minutes after the 11:30 deadline without penalty, if you have already submitted the work via ADI.

FOLIO

Type it directly, respecting the format in the model. Style your name and surname IN FULL CAPS, as shown in the model; they take the usual place of the publication title (the name of the newspaper or magazine brand). Arial Regular, 9 pt type size / 11 pt leading.

MAIN NEWS STORY (Source: <https://www.theguardian.com/global-development/2025/feb/27/ice-water-colombia-looks-to-a-future-without-glaciers>)

Headline (Times New Roman Bold, 42 pt type size / 42 pt leading, -40 negative tracking):

‘We used to think the ice was eternal’

Deck (Times New Roman Regular, 24 pt type size / 24 pt leading, -40 negative tracking; change it to FULL CAPS with the appropriate InDesign feature):

Colombia looks to a future without glaciers

Intro/summary deck (Times New Roman Regular, 14 pt type size / 14 pt leading, NO tracking; it includes some forced line breaks to balance the length of the lines):

In Sierra Nevada del Cocuy, people have watched the ice fields turn to exposed rock

and experts predict

these vital water sources

could be lost in 30 years

Byline (Times New Roman Bold, 10 pt type size / 11 pt leading, 50 positive tracking, FULL CAPS):

Euan Wallace

Dateline (Arial Bold, 9 pt type size / 11 pt leading, NO tracking):

Sierra Nevada del Cocuy

Body copy (Times New Roman Regular, 10 pt type size / 11 pt leading, justified with the last line aligned to the left only, 3 mm first-line left indent, except for the first paragraph):

At an altitude of 4,200 metres in the Sierra Nevada del Cocuy, Colombia, Edilsa Ibañez Ibañez lowers a cupped hand into the water of a glacial stream. A local guide and mountaineer, she has grown up drinking water that runs down from the snowy peaks above. As she stands up, however, the landscape that greets her is markedly different from that of her childhood. “We used to think the ice would be eternal,” says Ibañez, 45. “Now it is not so eternal. Our glaciers are dying.”

The Sierra Nevada del Cocuy is one of six remaining glaciers in Colombia. Although it has lost more than 90% of its ice since the second half of the 19th century, Ibañez says it contains about 36% of the country’s total glacial coverage.

Swathes of dry rock are exposed in areas once carpeted in snow in the high Sierra Nevada peaks. On the trail leading to the Cóncono peak, stone markers have been placed like gravestones to indicate the position of the snow line in years past. The farthest marker, dating from the end of the 19th century, is several kilometres from the nearest ice.

The peak itself presents a similarly grim picture. Fingers of greying ice slide towards the rocky mass below, where frozen boulders soften and thaw in the harsh sun. Deep within the glacier, the shifting ice emits loud cracks that rattle through the thin air above.

SUBHEADING (Arial Bold 9 pt type size / 11 pt leading): Facing irreversible losses

Although the Sierra Nevada del Cocuy is home to the largest glacial mass in the country, it is far from alone in its fate. Rising global temperatures and increasingly unpredictable weather patterns are devastating all six of Colombia's remaining glaciated areas. In 2024, neighbouring Venezuela became the first country in modern history to lose all its glaciers, and some predict that Colombia could go the same way in as little as 30 years.

"Even if we were to very aggressively over the next 10 to 20 years reduce greenhouse gas emissions, it wouldn't be enough," says Mathias Vuille, a professor of atmospheric and environmental sciences at the University at Albany, who has been studying the climate crisis in the Andes for more than 30 years. "They aren't accumulating any fresh snow and ice any more – they are doomed."

Colombia's lowest-lying glacier, Santa Isabel in Los Nevados national park, far west of the Sierra Nevada del Cocuy, will probably be the first to disappear. According to data from the Institute of Hydrology, Meteorology and Environmental Studies (Ideam), it will probably be gone within five years.

Matteo Giraldo, 32, from the nearby city of Pereira, has been walking in the mountains around Santa Isabel for the past 16 years. "I've cried for the situation with the glacier," he says. "To see it before and after has been something I've felt in my heart." Along with others who have frequented the glacier in recent decades, Giraldo has seen firsthand the changes that caused one section, Conejeras, to disappear entirely between December 2023 and February 2024.

The loss of Colombia's glaciers poses a ticking timebomb for those living in the country's high-altitude regions. Vuille says: "Glaciers are constantly melting in the tropics – that means they constantly release water. That's why they are essential, like a reservoir. It is your only water source if you live very close to the glacier."

SUBHEADING (Arial Bold 9 pt type size / 11 pt leading): A vulnerable source of water

The ability of glaciers to retain and release vast quantities of water makes them a vital source for communities living across the Andes. The Sierra Nevada del Cocuy alone contains the equivalent of about 256,000 Olympic swimming pools of water.

Unlike their counterparts in higher-latitude regions, such as Europe and North America, Colombia's tropical glaciers are relatively constant in temperature. This results in a shorter period of ice accumulation and a longer, year-round period of water release. People living in Colombia's mountains rely heavily on the swiftly diminishing glaciers for their main water supply.

Ibañez and her relatives, who live at the foot of the Sierra Nevada del Cocuy, consider themselves part of this group. "Very soon, we will be the first to run out of water," she says. "Most people here aren't aware of this."

Highlight (in a separate text frame, Times New Roman Italic, 16 pt type size / 16 pt leading):

All six remaining glaciers are vanishing as temperatures rise and weather patterns become unpredictable

Photo captions (Arial Bold, 9 pt type size / 11 pt leading):

Burned frailejones in La Cortadera after a fire devastated more than 200 hectares of páramo, an ecosystem acting as a reservoir.

Dry rock is now a common feature of once snow-capped areas on Colombia's Sierra Nevada del Cocuy glacier.

Photo credit for both pictures (Arial Regular, 9 pt type size / 11 pt leading, write it fully lowercase in order to style it as SMALL CAPS):

SECONDARY NEWS STORY (Source: <https://www.theguardian.com/world/2025/feb/27/pkk-leader-calls-on-kurdish-militant-group-to-disarm-signalling-start-of-fragile-peace-with-turkey>)

Headline (Times New Roman Bold, 32 pt type size / 32 pt leading, -40 negative tracking):

Jailed Kurdish leader calls for PKK to disarm

Deck (Times New Roman Regular, 18 pt type size / 18 pt leading, -20 negative tracking):

Öcalan's message follows four decades of guerrilla warfare

Byline (Times New Roman Bold, 10 pt type size / 11 pt leading, 50 positive tracking, FULL CAPS):

Ruth Michaelson

Dateline (Arial Bold, 9 pt type size / 11 pt leading, NO tracking):

Istanbul

Body text (Times New Roman Regular, 10 pt type size / 11 pt leading, justified with the last line aligned to the left only, 3 mm first-line left indent, except for the first paragraph):

The ageing leader of a Kurdish militant group imprisoned on a remote Turkish island has called on the group to disarm and dissolve itself, signalling the start of a fragile peace with Turkey after four decades of guerrilla warfare, attacks and reprisals. Abdullah Öcalan, a founding member of the Kurdistan Workers' party (PKK), a group long regarded as a terrorist organisation in Turkey as well as in Britain and the US, issued the message in a letter read out by allies in Istanbul.

"I am making a call for the laying down of arms, and I take on the historical responsibility for this call," Öcalan was quoted as saying. "All groups must lay down their arms and the PKK must dissolve itself."

Öcalan's message will have far-reaching implications across the Middle East, not least in Syria where Kurdish forces control significant territory, but also in Iran and Iraq.

The 75-year-old is serving a life sentence at an island prison south of Istanbul, after being captured by Turkish special forces in Kenya in 1999. His message was greeted with joy in the Istanbul conference room where Öcalan's allies gathered to broadcast his call, after displaying a photo of supporters visiting the white-haired septuagenarian. A group of older Kurdish peace activists ululated as the call to lay down arms was read out.

"This is the breaking point of history and it is a positive one," said Sırrı Süreyya Önder of the pro-Kurdish Peoples' Equality and Democracy (DEM) party. Önder added that this "requires the recognition of democratic politics," and legal support for a sustained peace.

Photo caption (Arial Bold, 9 pt type size / 11 pt leading):

Supporters of the pro-Kurdish DEM party display flags featuring Abdullah Öcalan.

Assessment criteria for News Design tasks

The first two weeks, effort and attention are enough, but this is a list of likely errors when imitating a model page. You start with a 10/10 mark and you are penalized for not following the model or the rules of newspaper design; the mark may vary because of errors not covered by this non-exhaustive list. On the contrary, for pages that you design yourself, you may compensate with extra points for creativity and taking risks.

- 1: Incorrect page size.
- 1: Incorrect typeface in an element.
- 1: (additional): Incorrect typeface in all elements.
- 1: Incorrect style (bold, full caps, small caps) in an element.
- 1: Irregular type sizes in equivalent elements (e.g. captions, body copy), beyond headlines.
- 1: Gutters are not respected.
- 1: Clear excess or defect of tracking in display type (or body copy, which should not have it).
- 1: Incorrect text alignment (e.g. justified headlines or body copy set ragged right).
- 1: Text columns not aligned to baseline grid.
- 1: Widow or orphan lines.
- 1: Incorrect stroke width of rules, boxes or borders.
- 1: Deformed or incorrectly placed pictures.
